

USER INTERFACE DESIGN

NAME: CHANDANA SHRI S

ROLL NO: 240701085

Exercise 7 – Develop low-fidelity paper prototypes for a banking app and convert them into digital wireframes using Inkscape

AIM:

The aim is to construct low-fidelity paper prototypes for a banking application and subsequently digitize them into structured wireframes using Inkscape.

TOOLS USED:

- Inkscape: <https://inkscape.org/>

CONCEPTUAL WORKFLOW:

1. Low-Fidelity Prototyping:

The process begins by identifying the core functional requirements of the banking app, such as login capabilities, dashboard access, and transfer mechanisms. Hand-drawn sketches are developed on paper to define the foundational layout, focusing on the placement of primary UI elements like buttons, input fields, and navigation.

2. Digital Transformation:

The paper sketches are translated into digital format using Inkscape, where the document is configured with appropriate dimensions and grid settings to ensure design consistency.

3. UI Element Construction:

Basic geometric tools (rectangles and ellipses) are utilized to represent UI components, while the text tool is employed to incorporate labels, placeholders, and instructional text.

4. Organization and Hierarchy:

Elements are systematically aligned and grouped to maintain a clean structure. Multiple screens—such as the login screen, dashboard, transfer input, and confirmation screen—are generated by duplicating the base layout, ensuring a cohesive design language across the application.

5. Finalization:

The completed wireframes are exported as image files to finalize the documentation of the navigation flow and UI structure.

SAMPLE BANKING APP WIREFRAMES

The image displays four wireframes for a banking application, arranged in a 2x2 grid. Each wireframe represents a different screen in the app's navigation flow.

- Top Left Wireframe (Login Screen):** Features a header with a hamburger menu icon and the text "BANK APP". Below the header are two input fields labeled "Username" and "Password". A "LOGIN" button is positioned below the password field, followed by a link labeled "Forget Password?". At the bottom is a "SIGN UP" button.
- Top Right Wireframe (Home Dashboard Screen):** Features a header with a hamburger menu icon and the text "BANK APP". Below the header is a "WELCOME, JOHN" message. A box displays "BALANCE: \$5,500.00". Below this are two buttons: "Transfer Funds" and "Pay Bills". At the bottom is a navigation bar with three items: "Home", "Accounts", and "More".
- Bottom Left Wireframe (Transfer Input Screen):** Features a header with a hamburger menu icon and the text "BANK APP". Below the header is a "To Account:" label followed by an input field. Below that is an "Amount: \$" label followed by another input field. A "SEND MONEY" button is positioned below the amount field. At the bottom left is a "< Back" link.
- Bottom Right Wireframe (Transfer Success Screen):** Features a header with a hamburger menu icon and the text "BANK APP". Below the header is a "Transfer Successful !" message. Below that is a confirmation message: "You sent \$500.00 to 123456789". A "DONE" button is positioned below the confirmation message. At the bottom is a link labeled "Backto Dashboard".

RESULT:

The banking app wireframes were successfully designed by transitioning from initial low-fidelity paper sketches to digital representations in Inkscape. The resulting interface demonstrates a clear navigation path from login through to successful transaction completion, effectively validating the application's layout and structural design.
