Exercise 3a –Prototype with Navigation using Proto.io

AIM:

The aim of this experiment is to design and create a mobile application prototype using Proto.io for a **Zomato-inspired food delivery app**. The prototype includes multiple screens such as Login, Home, Restaurant Listing, and Order Screen with proper navigation. It also demonstrates the use of familiar and modern navigation elements to enhance user experience.

TOOLS USED:

- **Proto.io** – https://proto.io/

Proto.io is an interactive prototyping tool used to design mobile applications by creating screens, adding UI components, and defining navigation between them.

PROCEDURE:

Step 1: Sign Up and Login

- Open Proto.io website
- Create an account or log in

Step 2: Create a New Project

- Click on *Create New Project*
- Enter project name: **Zomato UI Design**
- Select device size (Mobile 360 × 640)
- Click Create

Step 3: Design the Login Screen

- Add a screen named **Login Screen**
- Add Zomato-style UI elements:
  - Logo/Header
  - “Continue” button
  - Google & Email login options
- Add interaction:
  - On clicking **Continue**, navigate to **Home Screen**

Step 4: Design the Home Screen

- Add a new screen named **Home**
- Include:
  - Search bar (for restaurants/food)
  - Categories (Biryani, Pizza, South Indian, etc.)
  - Featured restaurants
- Add clickable restaurant cards
- Add interaction:
  - Clicking a restaurant → Navigate to **Restaurant Details Screen**

Step 5: Design Restaurant Details Screen

- Add:
  - Restaurant name
  - Menu items
  - Images and prices
- Add “Add to Cart” button
- Interaction:
  - Clicking item → Add to cart
  - Clicking cart → Navigate to **Order Screen**

Step 6: Design Order Screen

- Show selected items
- Display total price
- Add “Place Order” button
- Interaction:
    - Clicking button → Show confirmation screen

Step 7: Navigation Setup

- Back button → returns to previous screen
- Home icon → returns to Home screen
- Bottom navigation bar (optional)

Step 8: Preview the Prototype

- Click Preview
- Test:
    - Login → Home
    - Home → Restaurant
    - Restaurant → Order

Step 9: Share the Prototype

- Generate shareable link
- Users can test app navigation

Example 2: Navigation Elements

Familiar Navigation Elements

These are commonly used UI elements in apps:

- Buttons (Continue, Add to Cart)
- Bottom navigation bar
- Back button
- Search bar

These make the app easy to use because users are already familiar with them.

Unfamiliar Navigation Elements

These are modern or advanced interactions:

- Swipe gestures for food categories
- Hidden filters or menus
- Animated transitions between screens
- Smart recommendations

These improve user experience but may require learning.

Result:

The Zomato-inspired prototype was successfully designed using Proto.io. The application includes multiple screens such as Login, Home, Restaurant, and Order screens. Navigation between screens was implemented using interactive buttons and gestures. The prototype demonstrates both familiar and modern navigation techniques, improving usability and user experience.
