# USER INTERFACE DESIGN

## NAME: CHANDANA SHRI S

## ROLL NO: 240701085

## Exercise 3b –Prototype with Navigation using Wireflow

### AIM:

The aim of this exercise is to design a basic prototype using Wireflow that demonstrates the navigation flow between different screens such as Login Page, Home Page, Shopping Cart, and Payments Page.

### TOOLS USED:

● Wireflow (https://wireflow.co/)

● Basic UI design concepts

### PROCEDURE: E-Commerce Wireflow Prototype

#### Step 1: Planning the Prototype

- Identified the main steps required for the e-commerce application:
  - Signing In
  - Searching
  - Adding to Cart
  - Payment
- Planned a simple and logical navigation flow between these steps.

#### Step 2: Creating Wireflow Project

- Logged into the Wireflow platform.
- Created a new project for the e-commerce prototype design.

## Step 3: Designing Screens

### 1. Signing In Page

- Designed the login and registration interface.
- Included input fields for username/email and password.
- Added navigation to the Searching page after successful login.

### 2. Searching Page

- Created a layout for product search and browsing.
- Included search bar and product listing placeholders.
- Linked Searching page to Adding to Cart.

### 3. Adding to Cart Page

- Designed the cart interface showing selected products.
- Included product details, quantity, and total price placeholders.
- Connected Cart page to Payment page.

### 4. Payment Page

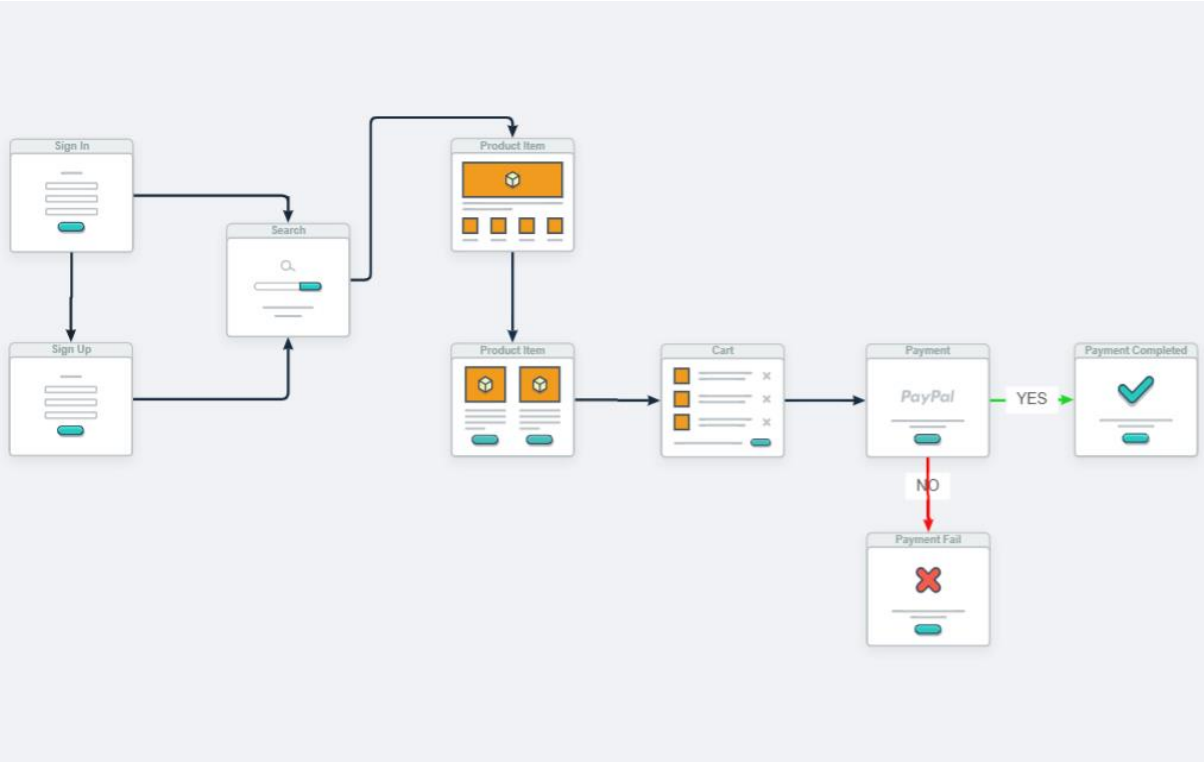
- Created payment interface with options like card/UPI.
- Added placeholders for entering payment details.
- Included confirmation option for completing the purchase.

## Step 4: Linking Screens (Wireflow)

- Connected all steps using arrows to represent user navigation:
    - Signing In → Searching
    - Searching → Adding to Cart
    - Adding to Cart → Payment
- Ensured smooth and logical flow between all stages.

**RESULT:**

A wireflow prototype was successfully created showing the navigation between Signing In, Searching, Adding to Cart, and Payment stages. The flow clearly represents how a user moves through the e-commerce application step by step.



**CONCLUSION**:

The wireflow prototype successfully demonstrates a clear and simple navigation flow between different application screens.
