

USER INTERFACE DESIGN

NAME: CHANDANA SHRI S

ROLL NO: 240701085

Exercise 6 – Experiment with different layouts and color schemes for an app.

AIM:

The aim of this experiment is to trial different app layouts and color schemes for a "Weather Updates" mobile application and evaluate user feedback on aesthetics and usability using the GNU Image Manipulation Program (GIMP).

TOOLS USED:

- GIMP (GNU Image Manipulation Program): <https://www.gimp.org/>
- Google Forms (For Feedback)

CONCEPTUAL WORKFLOW:

1. Design Development:

The creation of the application begins by establishing a base layout, which defines the spatial arrangement of the UI by sectioning off areas for the header, content, and footer.

2. Layer Organization:

UI components are managed through an organized layer system, which allows individual elements to be isolated for targeted modification or experimentation.

3. Visual Experimentation:

Multiple design variants are generated by applying different color palettes to the defined UI elements, creating a range of aesthetic options for comparison.

4. User Feedback Collection:

The evaluation phase involves creating a feedback form to capture user perspectives on the aesthetics and usability of the different variations.

5. Iterative Refinement:

Final design decisions are made by analyzing the collected user feedback to adjust the layout and color scheme, followed by a final round of testing to ensure usability.

RESULT:

The "Weather Updates" application layout was successfully designed in GIMP. Multiple color scheme variants were created and exported for user evaluation. The experiment effectively demonstrated the process of utilizing GIMP to prototype app aesthetics and gather user feedback for design refinement.
