USER INTERFACE DESIGN

NAME: CHANDANA SHRI S

ROLL NO: 240701085

Exercise 5a – Simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP

AIM:

To design and develop a user-friendly **Listenify music application** using the RAD model, focusing on attractive interface, easy navigation, and improved user experience through continuous feedback.

TOOLS USED:

- AXURE: https://www.axure.com/

PHASES OF RAD:

Phase 1: Requirements Planning

- Identify user needs and system requirements
- Define key features like browsing, searching, and playing songs
- Include playlist creation and song liking options
- Plan for recommended and recently played music
- Ensure clear understanding between users and developers

Phase 2: User Design

- Design main screens: Home, Explore, Playlist, Library, Now Playing
- Create wireframes and prototypes of the app
- Use attractive UI elements like album covers and icons
- Ensure easy and smooth navigation between screens
- Reuse components like buttons and music cards

Phase 3: Construction

- Develop interactive prototype connecting all screens
- Implement user flow (Home → Explore → Play → Playlist)
- Add dynamic features like music controls and transitions
- Test the prototype for usability issues
- Improve the design based on feedback

Phase 4: Cutover

- Finalize the app design and prototype
- Share with developers for implementation
- Provide documentation and user flow details

UI DESIGN:

HOME PAGE

EXPLORE PAGE

PLAY MUSIC PAGE

ADD TO PLAYLIST PAGE

RESULT:

The Listenify app was successfully designed with an attractive interface, smooth navigation, and key music features like browsing, playing songs, and managing playlists. The RAD approach helped improve the app through continuous feedback and quick development.
